become Solutions Problem 1 A car accelerates from rest to a speed of 30 ms in 10 seconds What is the cars acceleration Solution We can use the equation a v u t Where a acceleration v final velocity 30 ms u initial velocity 0 ms t time 10 s 3 Substituting these values a 30 0 10 3 ms Therefore the cars acceleration is 3 ms Problem 2 A ball is thrown vertically upward with an initial velocity of 20 ms How high does the ball go Solution At the highest point the balls final velocity will be 0 ms We can use the equation v u 2as Where v final velocity 0 ms u initial velocity 20 ms a acceleration due to gravity 98 ms s displacement height Substituting the values 0 20 298s Solving for s we get s 204 m Therefore the ball goes approximately 204 meters high Problem 3 A 10 kg box is pushed across a horizontal surface with a force of 50 N The coefficient of kinetic friction between the box and the surface is 02 What is the acceleration of the box Solution First we need to calculate the force of friction Ffriction k Fnormal Where k coefficient of kinetic friction 02 Fnormal normal force equal to the weight of the box 10 kg 98 ms 98 N Therefore Ffriction 02 98 N 196 N Now we can find the net force acting on the box Fnet Fapplied Ffriction 50 N 196 N 304 N Finally we can use Newtons second law to find the acceleration 4 Fnet m a a Fnet m 304 N 10 kg 304 ms Therefore the acceleration of the box is 304 ms Problem 4 A 2 kg object is moving with a velocity of 4 ms A constant force of 10 N is applied to the object for 3 seconds What is the final velocity of the object Solution We can use the equation v u at Where v final velocity u initial velocity 4 ms a acceleration Fm 10 N 2 kg 5 ms t time 3 s Substituting the values v 4 5 3 19 ms Therefore the final velocity of the object is 19 ms Problem 5 A 5 kg block is released from rest at the top of a frictionless incline that is 10 meters long and makes an angle of 30 degrees with the horizontal What is the speed of the block at the bottom of the incline Solution We can use the conservation of energy principle At the top of the incline the block has potential energy and no kinetic energy At the bottom the potential energy is converted to kinetic energy Potential energy at the top PEtop mgh Kinetic energy at the bottom KEbottom 12 mv Where m mass of the block 5 kg g acceleration due to gravity 98 ms h height of the incline 10 m sin 30 5 m v velocity at the bottom Setting PEtop equal to KEbottom 5 mgh 12 mv Solving for v v 2gh 2 98 5 99 ms Therefore the speed of the block at the bottom of the incline is approximately 99 ms Problem 6 A 2 kg object is moving with a velocity of 5 ms A 3 kg object is moving with a velocity of 2 ms What is the velocity of the center of mass of the system Solution The velocity of the center of mass Vcm is given by Vcm m1 v1 m2 v2 m1 m2 Where m1 mass of the first object 2 kg v1 velocity of the first object 5 ms m2 mass of the second object 3 kg v2 velocity of the second object 2 ms Substituting the values Vcm 2 5 3 2 2 3 45 08 ms Therefore the velocity of the center of mass of the system is 08 ms Problem 7 A 10 kg object is moving with a constant velocity of 4 ms What is the net force acting on the object Solution Newtons first law states that an object at rest stays at rest and an object in motion stays in motion with the same speed and in the same direction unless acted upon by an unbalanced force Since the object is moving with constant velocity it means there is no net force acting on it Therefore the net force acting on the object is 0 N Problem 8 A 5 kg object is suspended from a vertical spring The spring stretches 10 cm when the object is attached What is the spring constant of the spring Solution We can use Hookes Law F kx 6 Where F force exerted by the spring k spring constant x displacement from equilibrium 10 cm 01 m The force exerted by the spring is equal to the weight of the object F mg 5 kg 98 ms 49 N Substituting the values in Hookes Law 49 N k 01 m Solving for k k 49 N 01 m 490 Nm Therefore the spring constant of the spring is 490 Nm Problem 9 A 2 kg object is dropped from a height of 10 meters What is the speed of the object just before it hits the ground Solution We can use the equation v u 2as Where v final velocity what we want to find u initial velocity 0 ms a acceleration due to gravity 98 ms s displacement 10 m Substituting the values v 0 2 98 10 v 2 98 10 14 ms Therefore the speed of the object just before

it hits the ground is approximately 14 ms Problem 10 A 10 kg object is placed on a frictionless surface A constant force of 20 N is applied to the object What is the work done by the force over a distance of 5 meters Solution The work done by a force is given by W F d cos 7 Where W work done F force 20 N d displacement 5 m angle between the force and displacement 0 since the force is applied in the direction of motion Substituting the values W 20 N 5 m cos 0 100 J Therefore the work done by the force over a distance of 5 meters is 100 Joules Beyond the Solutions A Call to Deeper Understanding This document offers a stepping stone in your journey through Physics 121 While these solutions provide a framework for understanding mechanics true mastery comes from going beyond the surface level The joy of physics lies not only in solving problems but in delving into the underlying principles pondering their implications and finding connections to the world around you Remember every concept every equation is a doorway to a deeper understanding of the universe Explore these doors experiment with your own questions and let your curiosity guide you through the fascinating realm of physics

this thesis lays the groundwork for producing a new class of ultracold molecule by associating an alkali metal atom and a closed shell alkaline earth like atom specifically cs and yb such molecules exhibit both a magnetic dipole moment and an electric dipole moment in their ground state this extra degree of freedom opens up new avenues of research including the study of exotic states of matter the shielding of molecular collisions and the simulation of lattice spin models in detail the thesis reports the first and only ultracold mixture of cs and yb in the world giving details of the methods used to cool such contrasting atomic species together using sensitive two colour photoassociation measurements to measure the binding energies of the near threshold csyb molecular levels in the electronic ground state has allowed the previously unknown scattering lengths to be accurately

determined for all the cs yb isotopic combinations as part of this work the one photon photoassociation of ultracold cs yb is also studied yielding useful information on the excited state potential knowledge of the scattering lengths enables a strategy to be devised to cool both species to quantum degeneracy and crucially determines the positions of interspecies feshbach resonances required for efficient association of ground state csyb molecules with these results the prospect of bringing a new molecule into the ultracold regime has become considerably closer
