an elimination diet is an eating plan that omits a food or group of foods believed to cause an adverse food reaction often referred to as food intolerance by removing certain foods for a period of time and then reintroducing them during a challenge period you can learn which foods are causing symptoms or making them worse we often think of reactions to food as being a rapid allergic reaction such as when a person has an anaphylactic reaction to eating peanuts and their throat swells up however there are other ways our bodies can react to foods that may not be so immediate and may or may not be tied to an immune system response food intolerances may be triggered by various natural compounds found in foods natural sugars or proteins or common food additives such as natural and artificial colors preservatives antioxidants and flavor enhancers that can cause reactions through various mechanisms in the body there is currently dispute about the specific mechanisms involved in different reactions to foods and many tests to identify the suspected culprit s can be unreliable clinical experience has shown that an elimination diet is one of the best tools for identifying food culprits and is very safe as long a variety of foods are still eaten supplying all the essential nutrients symptoms of food intolerance can vary widely they can include stomach and bowel irritation headaches hives itching and even vague feelings of being unwell such as flu like aches and pains unusual tiredness or concentration problems certain foods and food groups are also known to exacerbate symptoms in people with specific conditions such as autoimmune disorders migraines irritable bowel syndrome gastro esophageal reflux gerd and others symptoms and their severity are unique to the individual they are influenced by specific compounds in the food a person s sensitivity level and how much of certain foods are eaten if the same food is eaten repeatedly or different foods with the same compound are eaten together or often the body may reach a threshold or a tipping point where symptoms begin to occur

this healthy elimination diet plan helps identify food intolerances and sensitivities to alleviate digestive issues or other common symptoms people may start an elimination diet for several reasons with one of the main reasons being to try and pinpoint food intolerances and sensitivities that cause digestive issues like gas bloating or stomach pain a food intolerance is where your body processes a certain food or foods in a different way than others which can cause that gastrointestinal discomfort or other symptoms food intolerances are different from a food allergy which involves an immune response that can be very dangerous if you suspect a true food allergy we encourage you to discuss this with your medical provider or allergist in this elimination diet plan we map out a week of meals and snacks that include delicious flavors and easy recipes what didn t we include the top 8 foods most commonly associated with food intolerances sensitivities and food allergies milk eggs tree nuts peanuts wheat soy fish and shellfish we set this plan at 1 500 calories a day but included modifications to make it 1 200 calories or 2 000 calories depending on your needs

an elimination diet is a short term eating plan that eliminates certain foods that may be causing allergies and other digestive reactions then reintroduces the foods one at a time in order to determine which foods are and are not well tolerated the main reason for doing an elimination diet is to pinpoint exactly which foods are the culprits for digestive and other health related issues when someone is experiencing ongoing symptoms and she can't seem to figure out what's causing them symptoms that might drive someone to do an elimination diet include persistent diarrhea bloating constipation eczema and acne it's estimated that 15 million adults in the u.s alone suffer from food allergies about 4 percent of the adult population and about 8 percent of children but these numbers don't even take into account food intolerances or food sensitivities that don't show up on allergy tests so this means the real numbers are likely a lot higher it's just another reason to test an elimination diet eight foods account for about 90 percent of all food allergy reactions milk eggs peanuts nuts wheat gluten soy fish

and shellfish elimination diets range in terms of what exact foods are permitted and eliminated but most will cut out all common allergens most elimination diets last for about 3 6 weeks it s believed that antibodies the proteins your immune system makes when it negatively reacts to foods take around three weeks to dissipate so this is usually the minimum time needed for someone to fully treat from sensitives and to notice improvements in their symptoms even when someone may think that they already eat a healthy diet if they still battle health issues that they can t resolve an elimination diet is usually extremely useful for identifying which suspected foods are truly the cause even if you ve opted to have a food allergy test done at a physician s office in the past you still might be missing something because it s common for allergy tests to show negative results for underlying food sensitivities that are not true allergies yet can still cause negative symptoms a food allergy is an overreaction of the immune system to a specific food protein but similar effects can happen even when someone doesn t test positive for an allergy when food protein is ingested that isn t well tolerated it can trigger a range of reactions that may cause symptoms like rashes hives swelling trouble breathing and various digestive gi tract pains identifying and removing allergies and sensitivities is vital to overall health when you struggle with an ongoing unidentified sensitivity your body constantly sends out inflammatory responses that can cause harm in multiple ways food sensitivities and allergies are correlated with an increased chance for developing

an end diet can assist an individual with recognizing food sources that cause inconvenience or indications of an unfavorably susceptible response as a rule the eating routine ought to be present moment and embraced under a medical care proficient s oversight there can be hazards just as advantages
